

Day 1 :- Overview of Peripherals Theory : Function of printer, scanners, webcams, and their connection interfaces.

Tasks 1 :- Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').

Ans. :-

- **Types of printers :-**

Printers Name	Real-Life Use Case
Inkjet Printer	Printing college assignments and project reports.
Laser Printer	Printing office documents in large quantities.
Dot Matrix Printer	Printing bills and invoices in banks or shops.

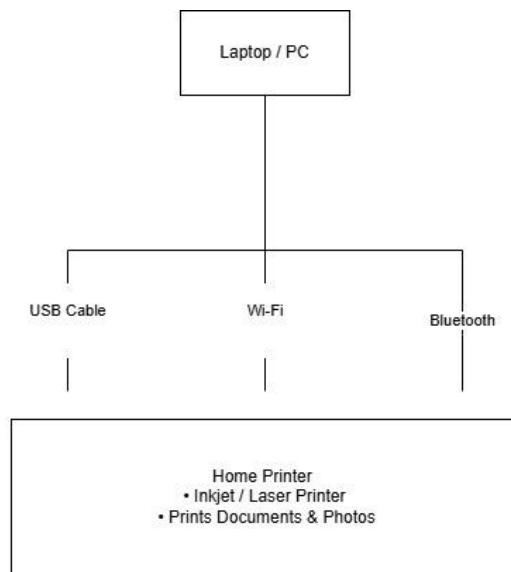

- **Types of scanners :-**

Scanners Name	Real-Life Use Case
Flatbed Scanner	Scanning photographs and certificates for digital storage.
Handheld Scanner	Scanning barcodes and documents while moving around.

- **Types of web cams :-**

webcams Name	Real-Life Use Case
USB Webcam	Attending online classes or video meetings on a PC.
Built-in Laptop Webcam	Making video calls through apps like Zoom, Google Meet, or Microsoft Teams.

Tasks 2 :- Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

Tasks 3:- List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.

Hint: Think about speed, convenience, and compatibility.

Connection Interface	Advantage	Disadvantage
USB	Fast and reliable data transfer; easy to set up.	Requires a cable, limiting movement and distance.
Wi-Fi	Wireless connection allows multiple devices to connect from anywhere within network range.	Can be slower or unstable if the network signal is weak.
Bluetooth	No cables needed and easy to connect nearby devices.	Shorter range and generally slower than USB or Wi-Fi.

Hint :-

➤ **USB :-**

- **Speed** :- High – Fast and reliable data transfer.
- **Convenience** :- Medium – Easy to use, but requires a cable.
- **Compatibility** :- High – Supported by most computers, printers, scanners, and webcams.

➤ **Bluetooth :-**

- **Speed** :- Low to Medium – Slower than USB and Wi-Fi.
- **Convenience** :- High – Wireless and easy to pair with nearby devices.
- **Compatibility** :- Medium – Supported by many devices, but not all peripherals.

➤ **Wi-Fi :-**

- **Speed** :- Medium to High- Generally faster than Bluetooth and suitable for networked devices.
- **Convenience** :- Very High – Wireless access from multiple devices over a network.
- **Compatibility** :- High – Widely supported by modern printers, scanners, computers, and smartphones.

Tasks 4 :- Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

➤ **USB Webcam :-**

1. Turn on the computer and log in to the operating system.
2. Locate an available USB port on the computer or laptop.
3. Connect the webcam's USB cable to the USB port.
4. Wait a few seconds for the computer to detect the webcam automatically.
5. If prompted, install the webcam drivers or software provided by the manufacturer.
6. Open the Camera application (Windows) or any video conferencing app such as Zoom or Google Meet.
7. Check whether the webcam is displaying video correctly.
8. Adjust the webcam position for a clear view.
9. Test the microphone (if the webcam has one) by making a test call or recording.
10. The webcam is now ready for use in online classes, meetings, or video calls.

Connection Method Used :-

- **Interface:** USB
- **Cable:** USB cable

Setup Requirements :-

- Available USB port
- Webcam drivers/software
- Video conferencing or camera application for testing
